

class EnergyCell():

EnergyCell LV

Input Parameter	Output Parameter		
Defined by user interface - Location in master table 23:longint - unitname type - Location type 1:0	Read in Request File - Volume in machine - unit loading - back loading - Active power in machine - Electric power at machine - Electric power averaged		
Results defined by user subroutines 23:longint - unit name - unit name - temporal resolution Fluxmeter/Parameter - measured power - weight of this parameter 3-stage/Parameter 3-stage - Power - weight/3-stage unit time - efficiency - function (for statistical) evaluation Fluxmeter - measuring strategy (parameter, manual) - operation	Results of Output 33:float 33:float/average of 33:floats 33:float/average loading, time, total 33:float 33:float/total 33:float/total 33:float/total		
Defined by model - load character - unitname - Fluxmeter - measured power - unitname - Fluxmeter 30 type for fluxmeter 30:float/3-stage - weight - Fluxmeter 30 unit (75, 100, 120 W) - unitname reference			

Laufzeitverhalten der energycell_LV
