

```
class EnergyCell():
```

EnergyCell LV

Input Parameter	Output Parameter		
Defined in source code - Location in source code 23:longer 24:shorter type - Location type 1:R	Found in Request files - Where is machine - user location - Node location - Action passed to machine - Execution passed to machine - Action passed to merged - Execution merged		
Results defined by user in substation 23:longer - user name - end name 24:shorter parameter - modified parameter - script of this parameter 1:longer parameter - Location - Pass - will be kept over time - ok now - Location (not modified) not modified 23:longer 24:shorter changing strategy (parameter, number) operation	Results in Output 23:longer - Info: execution place (CPU, Router) - Info: location (url, ip, host) 24:shorter - Execution - Parameters - Strategy		
Defined in model - Location (location) - user location 23:longer - operation 24:shorter 80 type for the firewall 24:shorter type 23:longer 80 type (75, 100, 120:800) - strategy behavior
